

Board of Trustees

John E. Price III – Chair

*Mark Allenwood, P.E. –
 Vice Chair*

*Wayne Brockway –
 Treasurer*

Jim Oppert, P.E. – Clerk

Ed Sharood, E.I.T.

Staff

*Michael Bolduc –
 Manager*

*Christopher Gallant, P.E.
 – Assistant Manager*

*Daniel Laflamme – Chief
 Operator*

*Bruce Hilton –
 Collection System
 Foreman*

*Steve Anderson –
 Electrician*

*Maurice Bedard – Lab
 Technician*

*Everett Horrocks –
 Operator*

Jeff Hanscom – Operator

*Dan Boissonneault –
 Operator*

*Shelby Carver –
 Operator*

*Cathy Riem – Office
 Manager*

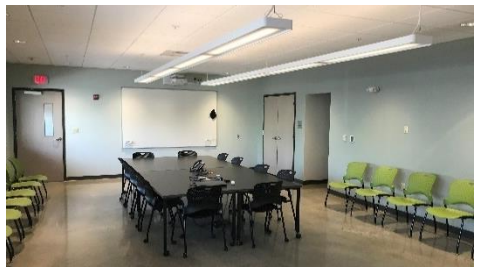

Heidi Souliere – Clerk

**We Have Moved!
 New Administrative Office is Complete**

After a lot of planning and hard work, we have officially occupied our new administrative office! What an improvement over our old office space. The new administrative building is located at 44 Water Street, just up the street from our old office at the treatment facility. The new space features administrative offices, a conference/multipurpose room, an engineering layout room, mailing and printing room, records room, training room, locker rooms, and a maintenance garage. Stop by for a tour of the new space. Our office hours are 7:00-4:00 (Monday. – Thursday) and 7:00-12:30 (Friday).

New administrative building at 44 Water St.

Conference room in administrative building.

**Lab Renovations
 Continue at K.S.D.**

The old administrative offices at the treatment facility are currently being renovated into a new laboratory for the plant. We are expected to occupy this space in July.

**Brown Street Pump
 Station Completion**

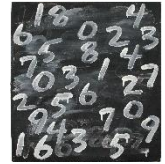

Work is now completed on our Brown St. Pump Station upgrade. We installed new pumps and panel, modified the wet well, and constructed a building around the station to help blend it into the neighborhood.

Storer Street Construction Planned

Kennebunk Sewer District has been working closely with the Town of Kennebunk, and K.K.W. Water District over the past couple months to finalize plans to improve the infrastructure on Storer Street. K.S.D. will be replacing approximately 450 feet of sewer main that is undersized near Mechanic Street. The water district plans on making water main improvements and the Town will be making drainage and roadway improvements. Working collaboratively with the Town and the other utilities allows us to minimize the length of impacts to the traveling public and reduce costs by sharing in the surface restoration. There will be impacts to the traffic patterns during this construction. Stay tuned for updates as we finalize plans for this project.

By the Numbers?

Interesting Stats About K.S.D

- 1955: Year K.S.D was incorporated
- 12: Full-time employees at K.S.D.
- 36: Miles of gravity sewer maintained
- 12: Miles of pressurized mains maintained
- 28: Sewer Pump Stations maintained
- 0.75: Million Gallons / Day treated at plant

Meet The New Employees at K.S.D

There are some new faces at Kennebunk Sewer District:

- Christopher Gallant, P.E. is the new Assistant Manager. Chris has many years of construction and management experience. Chris is a professional engineer with experience in mechanical and civil engineering. Chris comes to us from Saco Public Works where he served as the Deputy Director. Chris's experience in collection systems, data management, and contract oversight should be a huge asset to the District. Chris is looking forward to learning this new collection system and plant while improving efficiencies at K.S.D. Chris is the head coach of Kennebunk's Youth Wrestling program and enjoys spending time outdoors with his family.
- Daniel Laflamme is the new Chief Operator at K.S.D. Dan brings to us a wealth of wastewater knowledge and experience with over 28 years in the wastewater industry. Dan is also a licensed master electrician. Dan comes to us from the Biddeford treatment plant where he worked as the Chief Operator. Dan's experience with electrical controls, plant operation, pumps, and trouble shooting will make him an excellent fit with our crew and District. Dan is excited to learn a new plant and make positive changes and improvements utilizing his vast experience in this field. In his free time, Dan operates a small electrical business and enjoys riding roller coasters and attending concerts.

Important Notice!

Please remember that a toilet is not a trash can. Any products flushed other than toilet paper causes damage to our collection system (sewer pipes and pumps). We are being called in frequently to our Brown Street pump station for costly emergency repair (plugged pumps) due to blue rags (*right*) being flushed. This causes risks of environmental pollution and is expensive to correct.
